

# Android Homework - Android

MODIFICATION DATE

Wed Mar 23 2016

CREATOR

Ivy Knight

FILE NAME

PW\_android\_homework\_wireframe

DESCRIPTION

Full wireframe for the Android mobile experience on Android Devices.

## FULL WIREFRAME

Phone [p3](#)

Tablet [p6](#)

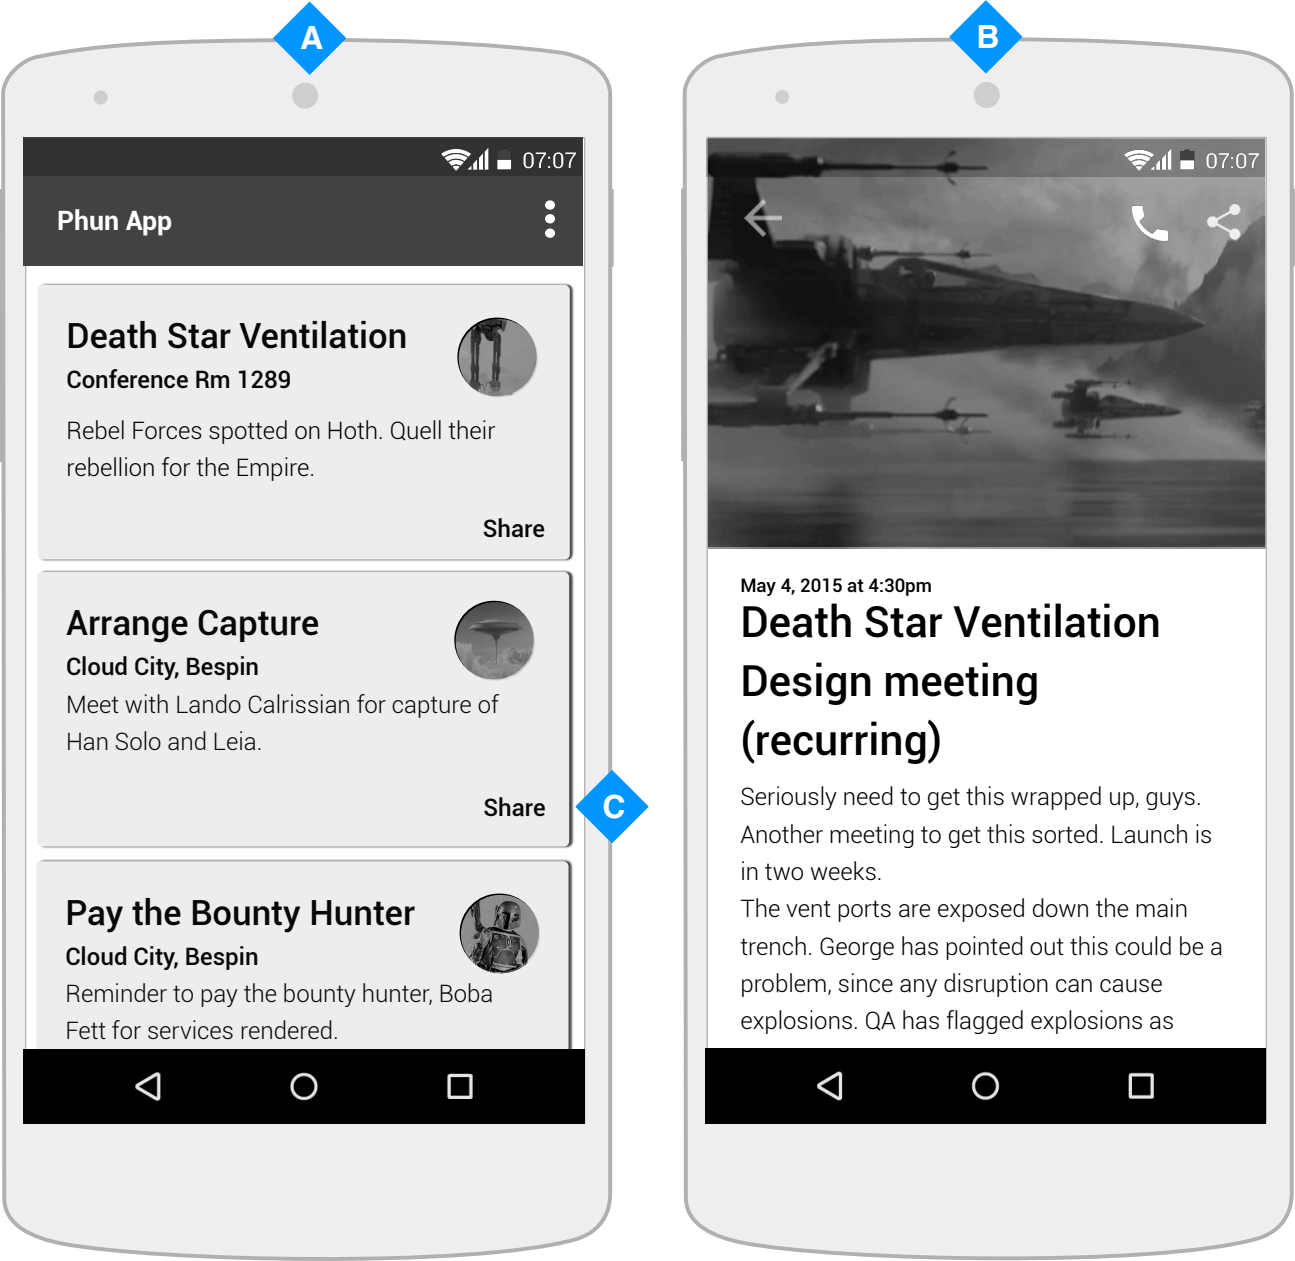

Phone

Home Landing

- A** The Home Screen is composed of an aggregated feed of cards.
- B** Each card when tapped will transition to its detail view.
- C** Users can Share from the card's action button. Share will open up a native bottom share sheet.

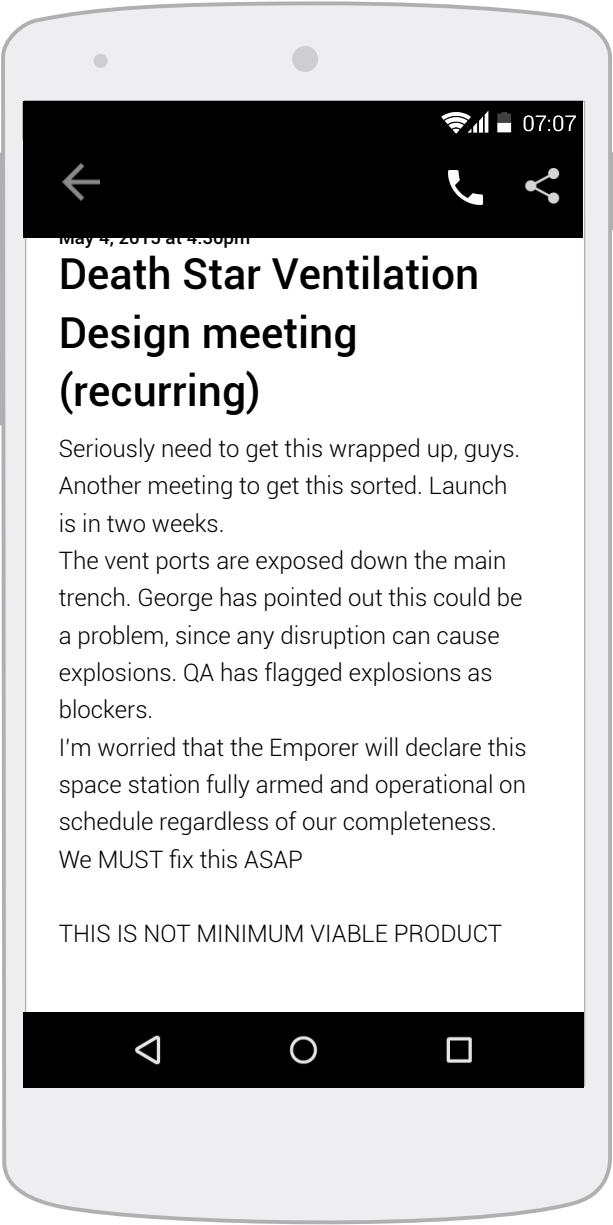

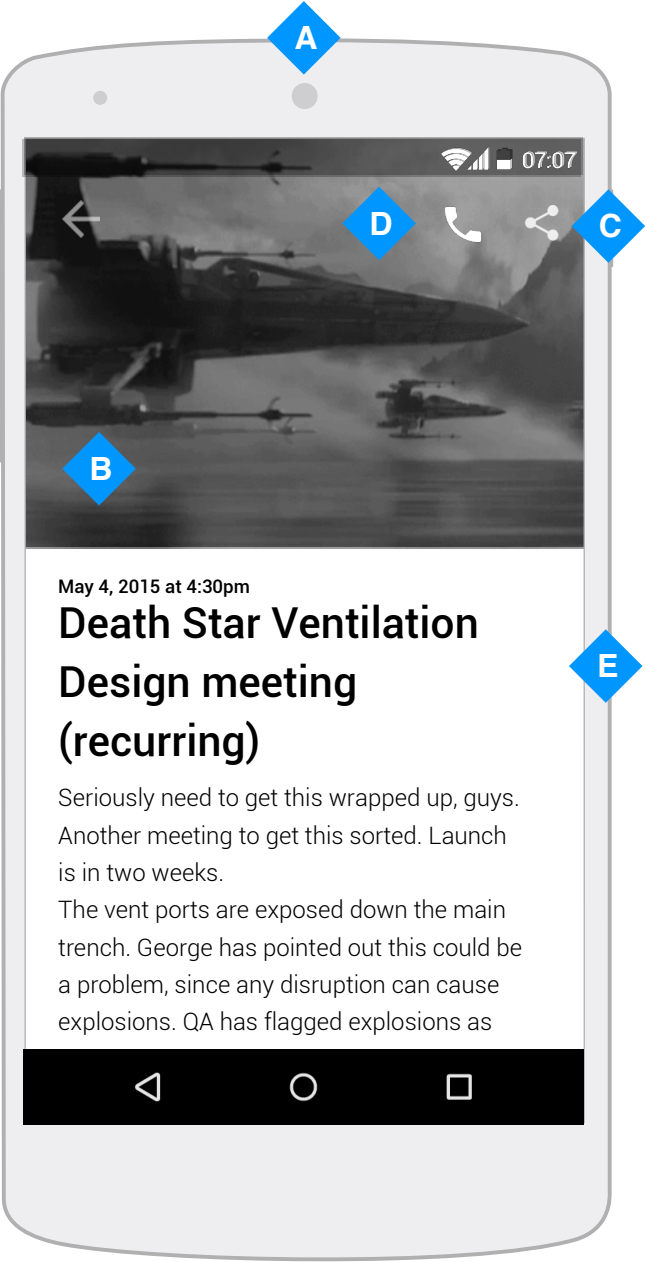

**100% Optional UX Suggestion:**  
**TRANSITION**  
Image will uncrop and transition to the primary header image from its point of origin.

Detail Screen

- A** When the user taps a card, the screen will transition into the detail view.
- B** The detail screen has a large header image which is pulled from the feed.
- C** Users can share the details by tapping the share icon in the action bar. This will present a native bottom share sheet.
- D** The user can call via the call icon in the action bar.
- E** The body content for details should be pulled from the feed. Header and content scroll up together.

**100% Optional UX Suggestion:**  
**SCROLLING TRANSITION**

Collapsing header transition: The body content should parallax over the header image as the user scrolls. Title will move into the toolbar.
