

iOS Homework

MODIFICATION DATE

Wed Mar 23 2016

CREATOR

Ivy Knight

FILE NAME

PW_iOS_homework_wireframe

DESCRIPTION

Full wireframe for the iOS mobile experience for iPhone and iPad.

FULL WIREFRAME

iPhone p3

iPad p6

iPhone

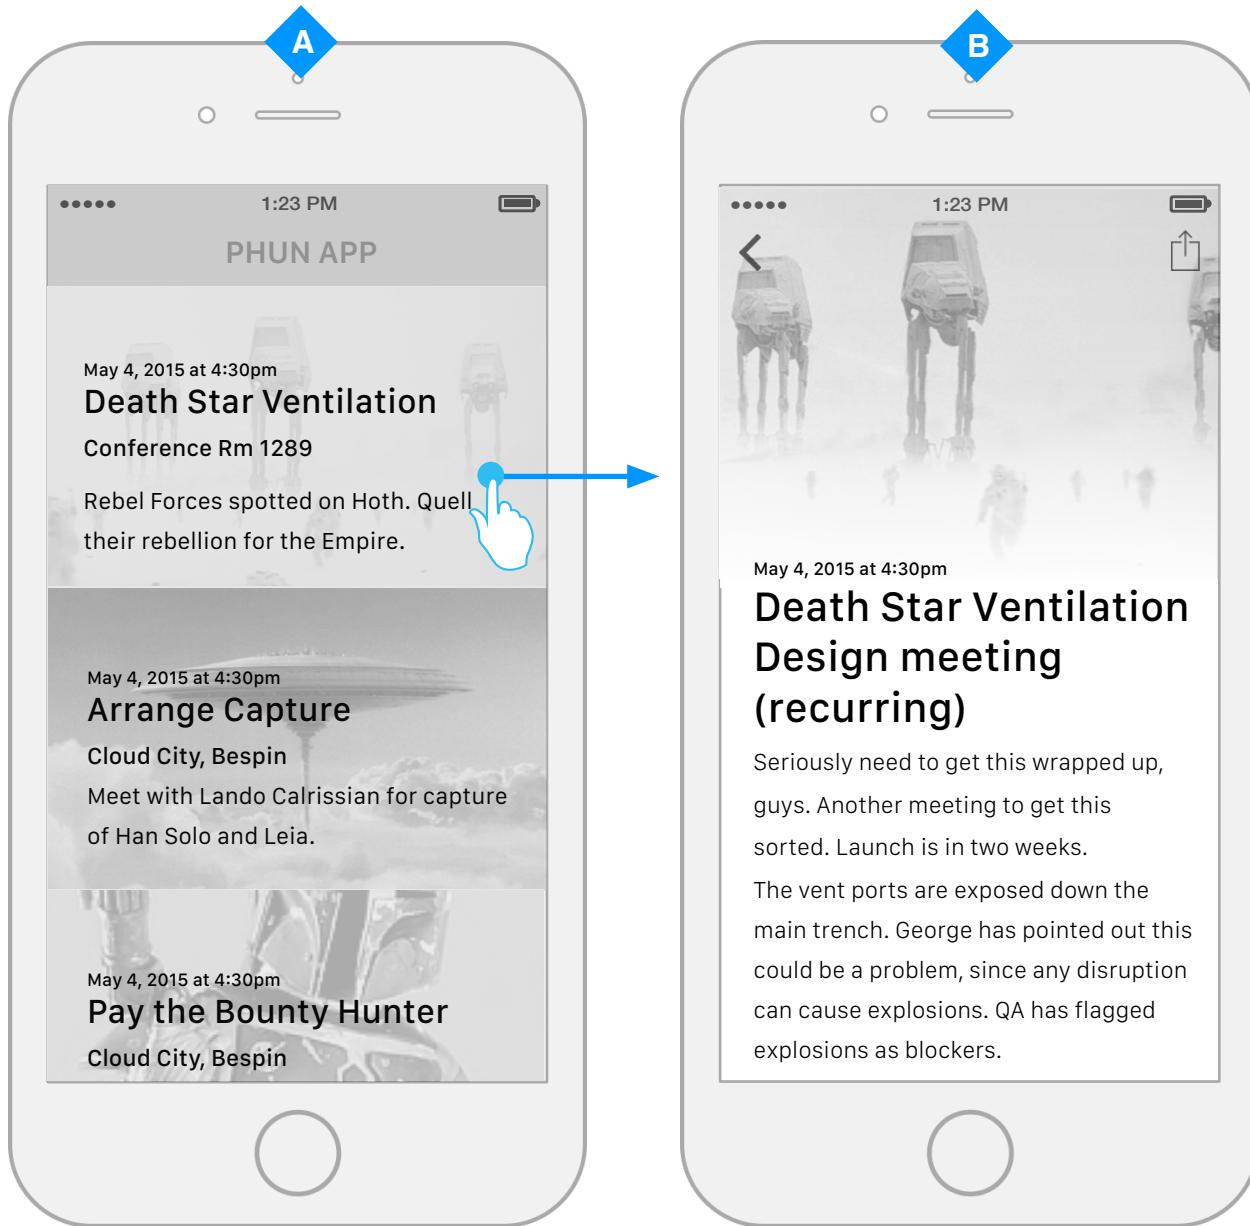

Home Landing

- A** The Home Screen is composed of an aggregated feed of tiles.
- B** Each tile when tapped will transition to it's detail view.

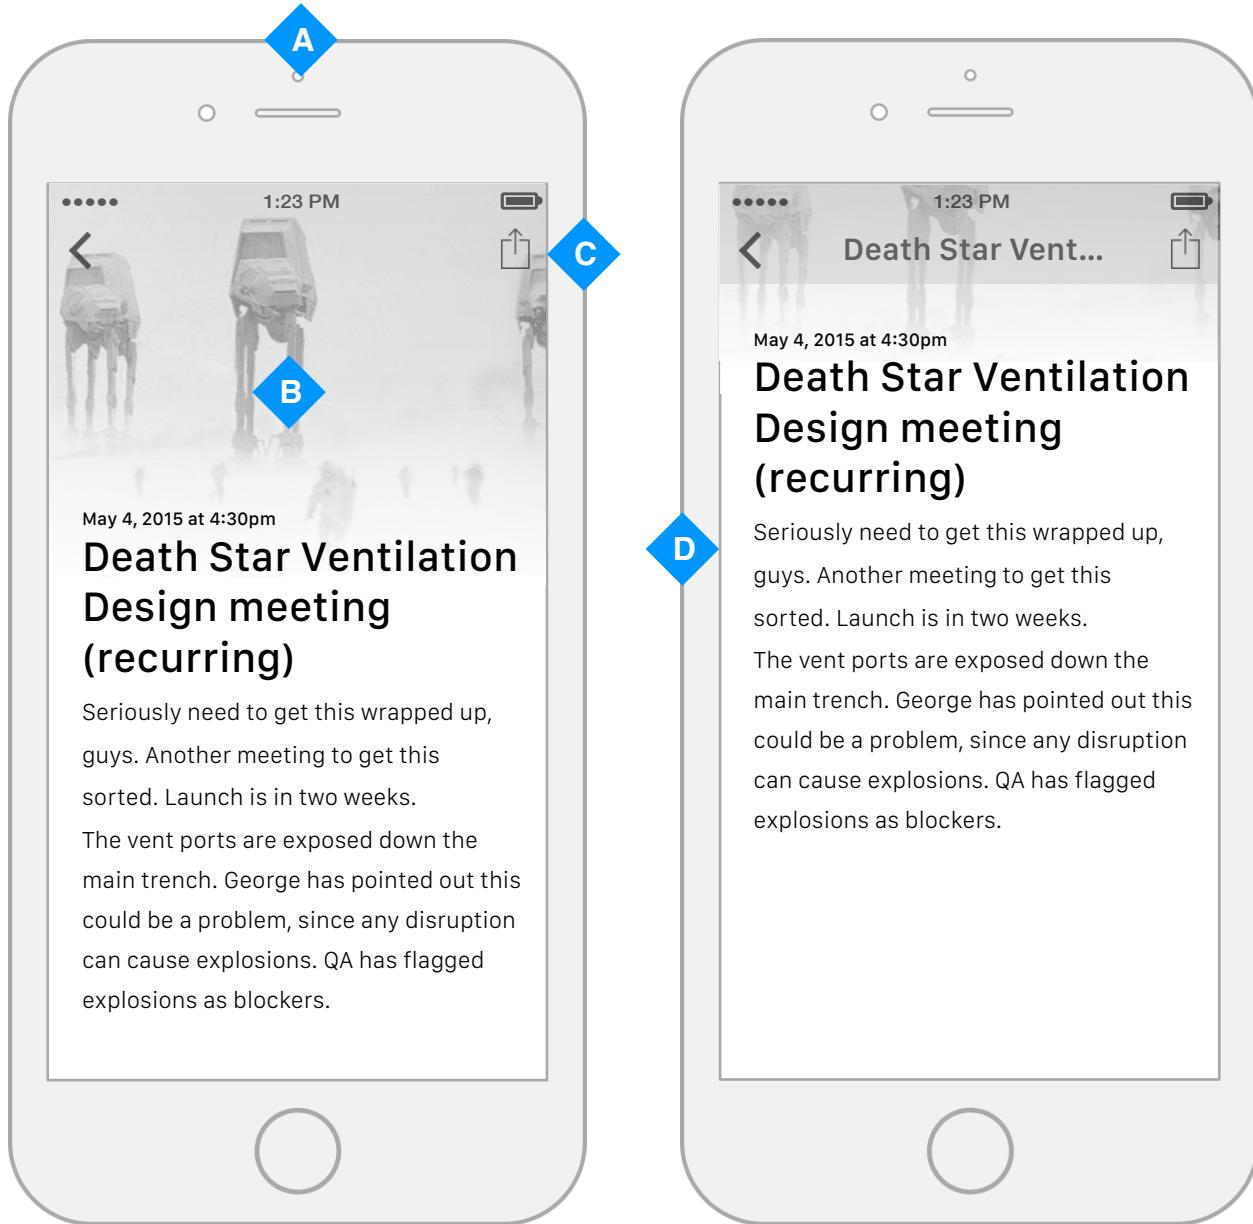

100% Optional UX Suggestion: **TRANSITION**

Image will transition with a dissolve/crossfade of the rest of the UI with the primary header image moving into place.

Detail Screen

- A** When the user taps an event tile, the screen will transition into the detail view.
- B** The detail screen has a large header image which is pulled from the feed.
- C** Users can share the details by tapping the share icon in the nav bar. This will present share sheet.
- D** The body content for details should be pulled from the feed. Header and content scroll up together.

100% Optional UX Suggestion:
SCROLLING TRANSITION
Collapsing header transition: As the user scrolls the nav bar will become opaque. Page label will move into the toolbar.
